To Whom It May Concern:

In August of 2008 US Congress passed the Consumer Product Safety Improvement Act of 2008. Passage of the CPSIA resulted in the gradual implementation of several provisions to the existing Consumer Product Safety laws and requirements. Among the newly implemented provisions of the CPSIA was a change in the acceptable levels of lead in paint and surface coatings on all consumer products.

Since the adaptation of changes in the Lead in Paint and Surface Coatings section of the CPSA, Ready 4 Kits certifies that all of our inks and surface coatings used to decorate our kits are CPSIA compliant and contain levels of lead at less than 90 ppm as is required by the CPSIA Lead in Paint and Surface Coatings provision of 2008.

The safety of our product is of the utmost importance to us here at Ready 4 Kits and we take pride in our commitment to maintaining consumer safety by implementing procedural, and product changes to sustain compliance throughout our line. We take all necessary steps to ensure that our products meet all Federal requirements put forth by the CPSA, the CPSIA, and the CPSC.

Any specific questions with regard to the afore mentioned policies and procedures may be directed to our safety and compliance department at safety@ready4kits.com.

Sincerely,

A handwritten signature in black ink that reads "Thomas Migneault".
